TITLE: High response resin type thermal transfer
material - comprises heat-resistant support, then
successively low mol.wt. resin release layer, thermal transfer
layer contg. binder and colourant

PATENT-ASSIGNEE: TOPPAN PRINTING CO LTD[TOPP]

ABSTRACTED-PUB-NO: JP 03274186A

BASIC-ABSTRACT:

Recording material comprises a support having heat withstandability with successively a release layer, comprising mainly a low MW resin of which softening point is 60-150 deg.C and MW 500-5000 and an organic or inorganic

filler and a thermal transfer layer contg. a binder resin, a colourant and a wear-resistant material where the binder resin comprises mixt. of a higher MW resin with glass transition temp. 50-110 deg.C and MW at least 8000 and a lower MW resin with softening point 60-150 deg.C and MW 500-5000.

The release layer pref. comprises 70-95 wt.% of a low MW resin (e.g. epoxy resin), 5-20 wt.% of filler (e.g. Ca-carbonate) and 0-20 wt.% of wax (e.g. carnauba wax) dispersed in a solvent (e.g. MEK) and applied on the support by e.g. a gravure coater. The thermal transfer layer pref. comprises 10-30 wt.% colourant, 40-80 wt.% binder resin (consisting of 20-70 wt.% of the high MW resin and rest of the low MW resin) and 5-30 wt.% of the wear-resistant material (e.g. Zn-stearate).

USE/ADVANTAGE - The material is used for forming (colour) image on a plastic sheet surface. Exhibits high heat response and transfers image accurately. The image formed stands rubbing and scratching well.
